

Fix Zabbix after Ubuntu 14.04 to 16.04 update

Fail about distr update to 16.04

remove php5.

```
wget http://repo.zabbix.com/zabbix/3.2/ubuntu/pool/main/z/zabbix-release/zabbix-release_3.2-1+xenial_all.deb
dpkg -i zabbix-release_3.2-1+xenial_all.deb && apt-get update
```

```
sudo apt-get install zabbix-server-pgsql zabbix-frontend-php zabbix-agent -y
sudo a2enconf zabbix
```

```
vi /etc/php/7.0/apache2/php.ini
```

```
sudo service apache2 restart
service zabbix-server restart
```

Fail after apt update with Zabbix 3.2.5 and Php 7.0.15

Call to undefined function mb_strlen

```
[Sun Apr 30 11:07:12.221441 2017] [:error] [pid 8443] [client 10.11.12.7:56262] PHP Fatal error:  Uncaught
Error: Call to undefined function mb_strlen() in /usr/share/zabbix/include/classes/user/CProfile.php:330

```

fix

```
apt install php php-cli php-fpm php-pgsql php-bcmath php-mbstring php-gd php-xml
systemctl restart apache2
systemctl restart zabbix-server
```
