Test Overview

(first ~25 minutes): RH12. Board in a plastic box with humidity absorber with a small fan. No perfect sealing. Not perfect airflow.

(next ~15 minutes): RH23-25. Board removed from the box and fan changed to big (with better airflow). The environment is a balcony with an electric heater and a small open window (in wintertime).

(next ~30 minutes): RH25-70. Wet clothes added.
