

Blynk local server for DIY CO2 meter example

Free open-source IoT platform. With local server available.

My code examples	https://github.com/liutyi/esp32-oled-senseair
Lib	https://github.com/blynkkk/blynk-library
Server	https://github.com/blynkkk/blynk-server
Iphone app	https://apps.apple.com/us/app/blynk-iot-for-arduino-esp32/id808760481
Example generator	https://examples.blynk.cc

Server setup

Setup server using docker

```
# test run
docker run -p 8080:8080 -p 9443:9443 mpherg/blynk-server
# final setup with customized image
docker run -d -p 8080:8080 -p 9443:9443 -p 8440:8440 -v /docker/blynk-server/config:/config/ -v /docker/blynk-server/data:/data --restart=always kyivtank/blynk-server:latest
```

Firewall and proxy

1. do not use http/https reverse proxy. use tcp forwarding by iptables or load balancers if needed
2. be sure firewalls open for 8080 and 9443 ports

Local server running example
