

Windows 10 and unsigned ambarella driver

To install driver needed for USBdirect to work

http://answers.microsoft.com/en-us/insider/forum/insider_wintp-insider_devices/how-do-i-disable-driver-signature-enforcement-win/a53ec7ca-bdd3-4f39-a3af-3bd92336d248?auth=1

1. SHIFT Reboot Windows 10
2. Select optional boot
3. Disable driver signature boot option
4. Install Driver from \USB Direct\Driver folder

Boot options menu may be skipped in case of UEFI BIOS.

To avoid it legacy boot need to be enable with legacy USB support for keyboard (it may not work otherwise).
